WORKING EXPERIENCE:

ZLYNE (June 2015 - current)

Long Beach, California

Zlyne started as a research project with the purpose of reducing traffic congestion at the Port of Long Beach. It was sponsored by METRANS Transportation Center. Faculty members participating in the project: Dr. Burkhard Englert, a Chair of Computer Science Department at CSULB; Dr. Mehrdad Aliasgari, Assistant Professor at CSULB; Dr. Shadnaz Asgari, Assistant Professor at CSULB.

Position: Full Stack Web Developer

- Installed and configured LAMP on Amazon AWS Ubuntu server. Worked with Apache file.
- Configured MySQL database tables and seeded the initial data.
- Used Laravel MVC framework to create models, views, controllers and other project files in PHP.
- Collaborated with other team members on creating the REST API with JWT token authentication.
- Used HTML, Bootstrap CSS, jQuery and JavaScript to create front end views.
- Created dynamic map and chart pages using AJAX.

DISCOUNT TWO-WAY RADIO (August 2007- July 2015)

Harbor City, California

A small business-to-business company, which specializes in selling commercial two-way radios. I helped reduce IT costs and speed up the development by replacing an overseas team as a single in-house developer.

Position: Front End Web Developer

- Elicited the requirements and analyzed the business logic to create solutions, which improved common processes inside company's customer relationship management system (Netsuite).
- Implemented heavy back end customizations to Netsuite using JavaScript.
- Used REST API to integrate Netsuite with other web services.
- Built websites' front end with HTML, CSS, jQuery, JavaScript and Netsuite as a back end.

- Rebuilt websites to utilize Magento with PHP, HTML, CSS, jQuery and JavaScript.
- Integrated Netsuite with Magento websites using SOAP.
- Mentored junior team members.

PROJECTS:

WEB APPLICATION FOR SHARED SCIENCE (September 2015 - February 2016) Long Beach, CA

Shared Science required a database application, which allowed to import data using CSV and generate custom reports. The project created a web application with the abilities to import CSV data, customize CSV maps, create and completely customize the look of the reports.

- Configured MySQL database.
- Used Laravel MVC framework to create models, views, controllers and other project files in PHP.
- Built a module to allow custom queries into the database using jQuery UI and PHP.
- Utilized a Laravel plugin to allow to store Blade templates into the database and completely customize the look of the reports.
- Used HTML, Bootstrap CSS, jQuery and JavaScript to create front end views.
